Use the 3 Wave Process when completing these revision packs.

1. Complete the questions without assistance
(Can't answer a question? Leave it and move on)
2. Use your notes to fill any gaps after step 1
3. Use the mark scheme to fill in any remaining gaps.

1. Having gaps after step 1 is normal, that's why we are doing revision!

2. If your notes don't help during step 2, they are not good enough!
(Change your note taking method and try to understand the problem)
3. If you don't understand why the mark scheme answer is correct, **see Andy**.

If you struggle with the questions in the pack, **STOP!** and complete some more revision.

If you come to a complete dead-end, **STOP!** and speak to **Andy** asap.

5 **Figure 2** represents two glass flasks, **P** and **Q**, connected via a tap.

Flask **Q** (volume = $1.00 \times 10^3 \text{ cm}^3$) is filled with ammonia (NH_3) at 102 kPa and 300 K. The tap is closed and there is a vacuum in flask **P**.
(Gas constant $R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$)

Figure 2

0 5 . **1** Calculate the mass of ammonia in flask **Q**.

Give your answer to the appropriate number of significant figures.
