Take Time to Answer
Use Paper \& Calculator
Work It Out
Review Missed Marks

Use the $\mathbf{3}$ Wave Process when completing these revision packs.

1. Complete the questions without assistance (Can't answer a question? Leave it and move on)
2. Use your notes to fill any gaps after step 1
3. Use the mark scheme to fill in any remaining gaps.
4. Having gaps after step 1 is normal, that's why we are doing revision!
5. If your notes don't help during step 2, they are not good enough!
(Change your note taking method and try to understand the problem)
6. If you don't understand why the mark scheme answer is correct, see Andy.

STOP If you struggle with the questions in the pack, STOP! and complete some more revision.

STOP If you come to a complete dead-end, STOP! and speak to Andy asap.

A student completes an experiment to determine the percentage by mass of sodium chloride in a mixture of sodium chloride and sodium iodide.

The student uses this method.

- 600 mg of the mixture are dissolved in water to form a solution.
- An excess of aqueous silver nitrate is added to the solution. This forms a precipitate containing silver chloride and silver iodide.
- Excess dilute ammonia solution is then added to the precipitate. The silver chloride dissolves.
- The silver iodide is filtered off from the solution, and is then washed and dried.

The mass of the silver iodide obtained is 315 mg

| 0 | 8 | Propanal can be prepared by the oxidation of propan-1-ol with |
| :--- | :--- | :--- | acidified potassium dichromate(VI).

An ionic equation for this reaction is

$$
3 \mathrm{CH}_{3} \mathrm{CH}_{2} \mathrm{CH}_{2} \mathrm{OH}+\mathrm{Cr}_{2} \mathrm{O}_{7}{ }^{2-}+8 \mathrm{H}^{+} \rightarrow 3 \mathrm{CH}_{3} \mathrm{CH}_{2} \mathrm{CHO}+2 \mathrm{Cr}^{3+}+7 \mathrm{H}_{2} \mathrm{O}
$$

| $\mathbf{0}$ | $\mathbf{8}$ | $\mathbf{1}$ Calculate the minimum volume, in $\mathrm{cm}^{3}$, of |
| :--- | :--- | :--- | $0.40 \mathrm{~mol} \mathrm{dm}^{-3}$ potassium dichromate( VI ) solution needed to oxidise $6.0 \mathrm{~cm}^{3}$ of propan-1-ol to propanal.

$M_{\mathrm{r}}$ of propan-1-ol $=60.0$
Density of propan-1-ol $=0.80 \mathrm{~g} \mathrm{~cm}^{-3}$

| 0 | $\mathbf{8}$. | $\mathbf{2}$ The reaction is done in a pear-shaped flask. |
| :--- | :--- | :--- |

Complete the diagram to show the assembled apparatus needed to prepare propanal from propan-1-ol in this way.

Label the diagram.
