## A' Level Chemistry <br> Year 1

## Unit 1: TOF

## Summer Examination Revision Pack

The questions in this pack should be attempted AFTER completing all other revision.

Use the 3 Wave Process when completing these revision packs.

1. Complete the questions without assistance (Can't answer a question? Leave it and move on)
2. Use your notes to fill any gaps after step 1
3. Use the mark scheme to fill in any remaining gaps.
4. Having gaps after step 1 is normal, that's why we are doing revision!
5. If your notes don't help during step 2, they are not good enough!
(Change your note taking method and try to understand the problem)
6. If you don't understand why the mark scheme answer is correct, see Andy.

STOP If you struggle with the questions in the pack, STOP! and complete some more revision.

STOP If you come to a complete dead-end, STOP! and speak to Andy asap.

6

| $\mathbf{0}$ | $\mathbf{6}$. $\mathbf{1}$ Explain how ions are accelerated, detected and have their abundance determined |
| :--- | :--- | :--- | in a time of flight (TOF) mass spectrometer.

| Question Marking Guidance Mark Comments <br> 06.1 (lons accelerated by) attraction to negatively charged plate / <br> electric field 1 Mark independently <br> lons detected by gaining electrons    <br> Abundance determined by (size) of current flowing (or    <br> amount of electrons gained) in the detector    1 Allow the transfer of electrons  <br> Allow current is proportional to abundance    |
| :--- |

| 06.2 | Mass $={ }^{52} / \frac{1000}{6.022 \times 10^{23}}$ |
| :--- | :--- | :--- | :--- |
| Mass $=8.6(4) \times 10^{-26}$ |  |$\quad 1$|  |
| :--- |

| 06.3 | $\mathrm{~V}^{2}=\left(2 \times 1.269 \times 10^{-13}\right) / 8.64 \times 10^{-26}$ | 1 | Allow correct rearrangement for V or $\mathrm{V}^{2}$ |
| :---: | :--- | :---: | :--- |
| $\mathrm{~V}=1.71 \times 10^{6} \mathrm{~ms}^{-1}$ | 1 | Allow ecf from 6.2 (note if $8.6 \times 10^{-23}$ in 6.2 leads to approx. <br> $5.4 \times 10^{4} \mathrm{~ms}^{-1}$ ) |  |

| 06.4 | Sketch with peaks at $158,160,162$ <br> In ratio $25 \%: 50 \%: 25 \%$ | 1 | Mark independently |
| :---: | :--- | :---: | :--- |
|  | Allow approx. ratio $1: 2: 1$ |  |  |

| 06.5 | $\%$ abundance ${ }^{\mathrm{m}} \mathrm{Xe}=20(\%)$ | 1 | Working must be shown |
| :--- | :--- | :---: | :--- |
|  | $131.31=\left(0.28^{*} 129\right)+\left(0.25^{*} 131\right)+\left(0.27^{*} 132\right)+\left(0.20^{*} \mathrm{~m}\right)$ | 1 |  |
|  | $131.31-104.51=0.2 \mathrm{~m}$ | 1 |  |
|  | Mass number $=134$ | 1 | Answer must be an integer |

 The sample was ionised by electron impact ionisation. The spectrum produced showed three peaks with abundances as set out in Table 1.

Table 1

| $\mathbf{m} / \mathbf{z}$ | Abundance/\% |
| :---: | :---: |
| 58 | 61.0 |
| 60 | 29.1 |
| 61 | 9.9 |

Give the symbol, including mass number, of the ion that would reach the detector first in the sample.

Calculate the relative atomic mass of the nickel in the sample.
Give your answer to one decimal place.

Symbol of ion $\qquad$

Relative atomic mass $\qquad$

| Question | Marking Guidance | Mark | Additional Comments/Guidance |
| :---: | :--- | :--- | :--- |
| 01.4 | ${ }^{58} \mathrm{Ni}^{+}$ | M |  |
|  | $A_{\mathrm{r}}=[(58 \times 61.0)+(60 \times 29.1)+(61 \times 9.9)] / 100$ | 1 | M1 needs mass and charge - allow subscripts |

| $\mathbf{0}$ | $\mathbf{8} \quad$ A sample of bromine was analysed in a time of flight (TOF) mass spectrometer and |
| :--- | :--- | found to contain two isotopes, ${ }^{79} \mathrm{Br}$ and ${ }^{81} \mathrm{Br}$

After electron impact ionisation, all of the ions were accelerated to the same kinetic energy ( $K E$ ) and then travelled through a flight tube that was 0.950 m long.

| $\mathbf{0}$ | $\mathbf{8}$ | $\mathbf{1}$ |
| :--- | :--- | :--- | $\mathrm{The}^{79} \mathrm{Br}^{+}$ions took $6.69 \times 10^{-4} \mathrm{~s}$ to travel through the flight tube.

Calculate the mass, in kg, of one ion of ${ }^{79} \mathrm{Br}^{+}$
Calculate the time taken for the ${ }^{81} \mathrm{Br}^{+}$ions to travel through the same flight tube.

The Avogadro constant, $L=6.022 \times 10^{23} \mathrm{~mol}^{-1}$
$K E=\frac{1}{2} m v^{2} \quad$ where $m=\operatorname{mass}(\mathrm{kg})$ and $v=\operatorname{speed}\left(\mathrm{m} \mathrm{s}^{-1}\right)$
$v=\frac{d}{t} \quad$ where $d=$ distance $(\mathrm{m})$ and $t=$ time $(\mathrm{s})$

| $\mathbf{0}$ | $\mathbf{8} .2$ | $\mathbf{2}$ Explain how ions are detected and relative abundance is measured in a TOF mass |
| :--- | :--- | :--- | spectrometer.

| $\mathbf{0}$ | $\mathbf{2}$. | $\mathbf{2}$ Give the formula of the ion that reaches the detector first in the TOF mass |
| :--- | :--- | :--- | spectrometer.

| $\mathbf{0}$ | $\mathbf{2} .3$ A sample of germanium is analysed in a TOF mass spectrometer using |
| :--- | :--- | :--- | electron impact ionisation.

Give an equation, including state symbols, for the process that occurs during the ionisation of a germanium atom.

| 0 | 2 | 4 | In the TOF mass spectrometer, a germanium ion reaches the detector |
| :--- | :--- | :--- | :--- | in $4.654 \times 10^{-6} \mathrm{~s}$

The kinetic energy of this ion is $2.438 \times 10^{-15} \mathrm{~J}$
The length of the flight tube is 96.00 cm
The kinetic energy of an ion is given by the equation $K E=\frac{1}{2} m v^{2}$
where
$m=$ mass / kg
$v=$ speed $/ \mathrm{ms}^{-1}$
The Avogadro constant $L=6.022 \times 10^{23} \mathrm{~mol}^{-1}$
Use this information to calculate the mass, in g , of one mole of these germanium ions. Use your answer to state the mass number of this germanium ion.
